KEY SKILLS:

Java | C++ | C | Data Structures and Algorithms | OOPS Concepts | DBMS | Operating System

Software Engineering | Computer Networks | MYSQL | HTML | CSS | Block Chain

PROJECTS:

1) Hotel Management System. [LINK]   [AWT, SWING & MYSQL]

1. This is a **standalone** application which can be used to manage all the hotel activities that are traditionally managed on **sheets & papers** by hotel staff.
2. This application has an **Expense Manager** which can help the hotel to keep track of their spending's and their savings.
3. As it is a **standalone** module so it can easily be managed by hotel staff on the hotel's private computer.

2) A Website of a Fictional Coffee Shop. [LINK]   [PHP, AJAX & MYSQL]

1. User can **Register/Login** to the website in order to access our **blog page.**
2. In this project we created a **contact page** where users can find the **location** of the cafe via **Google maps.**
3. Users can **mail us** any time from anywhere. The website is **fully responsive** i.e. it can work with any device/any screen dimension.

3) Quiz Application. [LINK]   [AWT, SWING & APPLET]

1. In this project everything is managed under **4 frames** only. User can give the test by entering the name. Each question has **4 options** and **10 points** will be given for every right submission.
2. It consists of **10 questions** each with **15 seconds**, **1 lifeline** is given which will help the user if he/she gets stuck somewhere. At the end your **score** will be displayed on separate frame which will be out of 100.

4) Personal Website. [LINK]   [HTML, CSS & JAVASCRIPT]

1. Complete **responsive website** i.e. can work with any device.
2. The website **will display my qualifications, projects and achievements.** And user can contact with me using my **sociallinks**.
